Pet wellness

Like us, early detection in pets can be key to preventing diseases, extending their lives, reducing (and sometimes even avoiding) medical bills. Give your pet the best chance of a long and happy life by keeping an eye on their conditions and with an annual health check.

Signs of sickness you don't want to ignore:

- Increased panting or difficulty breathing
- Diarrhoea, "accidents" and changes in frequency of urination
- Vomiting
- Changes in appetite or thirst
- Limping and showing signs of pain
- Aggression
- Lumps, bumps, funny 'scabby bits', non-healing wounds
- Weight loss
- Changes in normal physical activity
- Random bleeds
- Smelly breath.

Comprehensive blood test panel

This diagnostic panel provides your pet's baselines, as well as indications of wellness for pets of all ages.
